Comprehensive solutions
for preparing, storing
and distributing medicines

WIEGAND®
Medication Safety

Safety – no more mix-ups

To ensure a maximum degree of safety it is essential that each and every MediDispenser is marked with the name of the patient for whom the medication is prescribed. Ideally the time for administering the medicine should also be mentioned. The more information that is found on a MediDispenser, the simpler and safer becomes the medication process. Labelled covers have the potential of mix-ups, which should be avoided. With little space for a label on the dispenser rim, the Dispenser Marker may serve the purpose.

MediLine DISPENSER

Dispenser Marker
No. 64.738

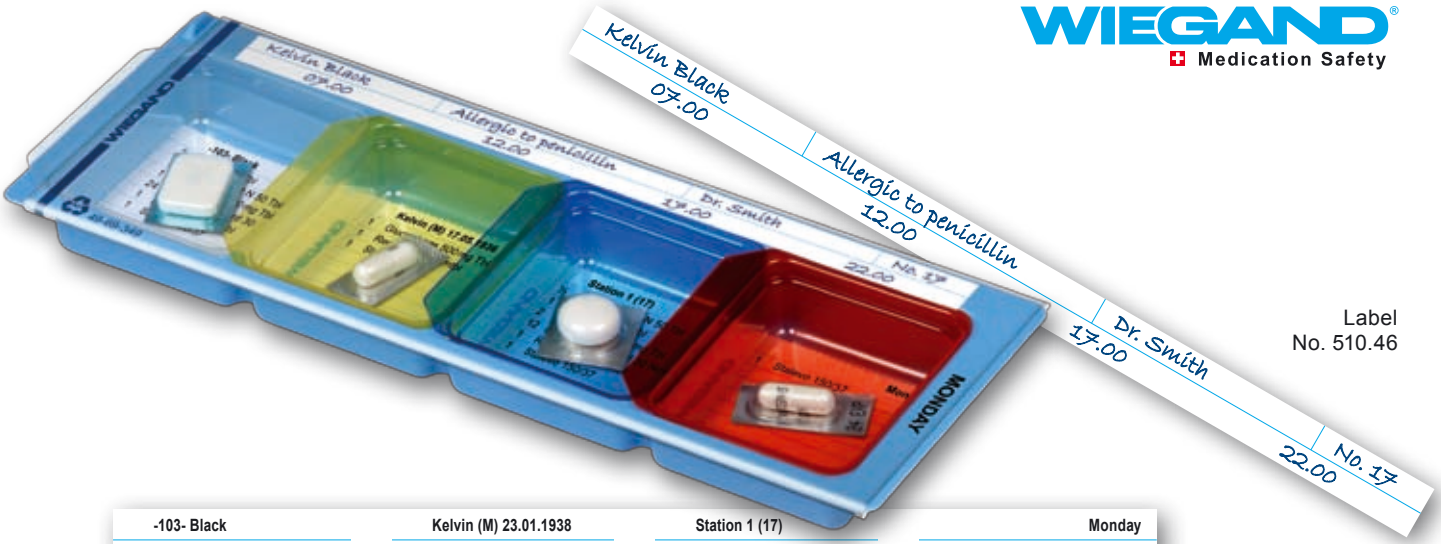
Label Holder
No. 15/15SD

Dispenser Marker

Even the smallest dispensers can now be neatly labelled. The ink is water resistant and is dishwasher-proof. The eraser at the end of the marker can be used to delete lettering.

Label Holder

This Label-Holder can be fixed firmly on any WIEGAND® Distribution-Tray. This allows the MediDispenser or container on the tray to be allocated to the right patient. The Label-Holder can also carry RFID or bar-coded services (blood-sampling or changing of dressings, etc.). The code is then placed on a Distribution-Tray together with the material needed.



Label
No. 510.64-7

Efficient preparation

As the entire information about the drugs to be prepared is found on the label of the MediDispenser, the preparation process becomes a lot more efficient and safer. Patient, medication details, date and dispensing time are clearly visible.

Safe administering

Labels to be inserted into the MediDispenser allow an extensive documentation of the patient, medication details, dispensing times and dispensing day. Hence, each time the nurse needs to administer the drugs required by the patient, she has the possibility to check again the contents of the MediDispenser. Is this the correct dispenser for this patient? Do the drugs inside the dispenser correspond with the doctor's prescription?

Screen Print
clean, low cost, long-lasting

If the requirements of the particular ward allow a consistent labelling of its dispensers, it is worthwhile considering a screen print solution. Week days or dispensing periods (morning, noon, evening and night), or both varieties combined, can be printed in different languages and on different types of MediDispenser.

Imprinting
MediDispenser

Week Sets are available
in different languages
and versions

Week Days Sticker

If only few MediDispensers need to be labelled identically, the Week Days Sticker represents a good alternative to the screen print. A further utilisation of the sticker is the labelling of an additional 8th dispenser in a week-set.

Dispensing Period Sticker

The perforated, transparent stickers with the imprint «MORNING, NOON, EVENING, NIGHT and RESERVE» are designed to be used with divisible dispensers. This finally allows the nurse to correctly label this kind of MediDispenser with the correctly and individually placed dispensing period.

Art. 510.54 WIEGAND

Dispensing Time Sticker

Until now it was not possible to individually label the compartments if they were of different number and size. Sticker No. 510.54 covers the most common dispensing times, but also allows less common medications to be accurately timed.

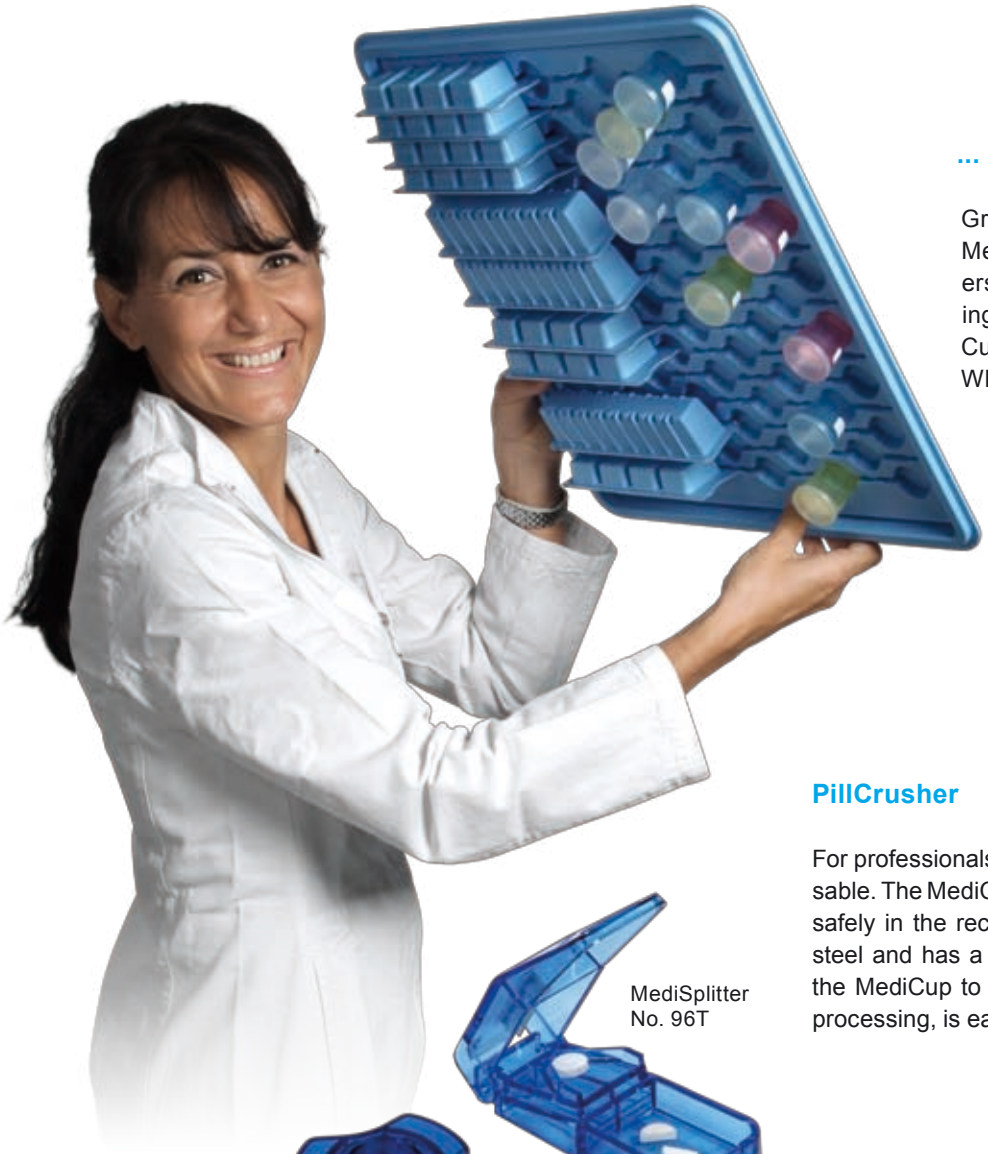
Practical – aides for everyday use

The everyday life of a nurse is not easy; therefore anything that makes the job easier is always welcome. With MediDispensers and MediCups, reliably fixed on the Distribution Tray, the distribution of medicines is very efficient - even at a brisk pace through the corridors and in the tight confines of rooms. The Distribution-Trays fit both in FlexLine Trolleys, and in CompactLine Cupboards. Distribution-Trays are universally applicable and can be used to transport almost everything to the patient's bedside.

MediLine DISPENSER

Universal Mounting Plate for Distribution Trays

With the help of the small mounting plate (No. 16), recipients can be combined and safely placed on a Distribution Tray. The mounting plate is fixed with a sticker on any recipient or box with a smooth surface. This add-on makes a Distribution Tray universally applicable.



... and it holds!

Grooves for the non-slip attachment of MediDispensers, Label-Holders or holders for Blister bags combined with clamping recesses for safe placing of MediCups for liquid medicines distinguish the WIEGAND® Universal Distribution-Trays.

Dispenser pouch No. 75.1
for partitioned tablets or
effervescent tabs

MediSplitter
No. 96T

MediCrusher
No. 98T.1

PillCrusher

For professionals the WIEGAND® PillCrusher is indispensable. The MediCup with the tablet to be crushed is placed safely in the recipient. The mortar is made of stainless steel and has a handy large grip as well as a cover for the MediCup to prevent spills. The crusher allows swift processing, is easy to clean and is very robust.

PillCrusher
No. 97

Oral Dispenser

If a secure and precise dosage of liquid medicine is demanded, you will have to turn to Oral Dispensers. With success the Oral Dispenser finds its application in paediatrics, geriatrics, psychiatry, by babies, by disabled persons and by feeding patients with stomach tube.

Details
- dish washer basket with lid
- insert for 18 Inlay-Dishes
- 415x90x70 mm

Transparent Sliding-Lids

Sliding-Lid production is a well guarded secret. The covers close the MediDispenser so firmly that no humidity can penetrate. A series of scientific tests in England showed outstanding results.

Material
PET: Polyethylene terephthalate is a polyester plastic (suitable for food). Contains no latex and no softeners. PET is UV-B, UV-C-FUV, UV-C-VUF, EUV and XUV resistant.

Recycling
- Emission free recycling
- Energy recycling (fuel) no reservations
- Very good ecological balance

Cleaning instructions

Washing	Clean with luke-warm water and mild detergent. (Hydrolysis)
Chemicals	Not allowed
Dishwasher	Not suitable
Sterilisation	Gas, radio-isotope (no steam!)

From approx. 45° C, WIEGAND® Sliding-Lids begin to open up their fold, due to the special manufacturing procedure. Thus the strength of the clamp reduces and a hermetic closure is no longer ensured.

Blue MediDispenser and Trays

All blue WIEGAND® products are manufactured deliberately in elaborate deep-drawing procedures. Material formed in this way becomes very resistant, and even withstands dropping. The “blue line” is light sensitive. Avoid UV-exposure

Material
Polystyrene (food foil). Contains no latex, fluorine, cadmium, lead, bromine or chlorine.

Recycling
- Emission free recycling
- Energy recycling (fuel) no reservations
- Very good ecological balance

Cleaning reference

Chemicals	with frequent use of caustic solutions, alcohol and acids, the plastic becomes brittle
Dishwasher	at 55° C (eco-program) without any problem, at 65° C maximum 45 min. running time at 95° C (industrial rinsing machines) 2 min. running time
Sterilisation	gas, radioisotopes, (no steam!)

WIEGAND® Dispensers have been certified by various European states.
